

**In campo con te,
dal 1879**

Today VOLPI is one of the leading brands, in Italy and in Europe, for the supply of equipment for agriculture, gardening and industrial use thanks to its constantly evolving portfolio, aimed to provide an effective response to the needs of professionals. Vision, capacity for innovation and passionate knowledge of the market have been, for more than 140 years, the lifeblood that has fueled the growth of the brand VOLPI ORIGINALE and of all the people who work in this historic Italian company. This is all meant to make the activities of professionals and hobbyists easier, safer, more efficient as well as more sustainable.

In campo con te, dal 1879.

From pioneers of spraying to drivers of innovation

In campo con te, dal 1879.

1879

The company was founded in Casalromano (MN) for the production of sprayers. The first VOLPI products were made of copper and brass and all the manufacturing stages, such as bending, welding, riveting and polishing took place at our premises.

1950-1960

VOLPI specialises in the design and construction of motor pumps to be applied to agricultural vehicles. This translates into the need for qualified personnel and the acquisition of very advanced knowledge of metallic materials and specific technologies of the sector.

1966-1970

In 1966, with the advent of plastic, VOLPI company was the first to launch on the market a sprayer equipped with plastic tank. It was the 20 lt GLORIOSA SUPER Mod. 66, followed four years later by the 10 lt Mod. 70.

1978-1981

Sprayers UNI 12-15 lt (and then also 18 lt) were born in these years, characterised by the almost total unification of spare parts, to make after-sales service more immediate for customers.

Telling the story of our company means retracing the most significant stages in the development of sprayers in Italy. The company was founded in 1879 around the project of brothers Davide and Luigi Volpi to make knapsack sprayers, which were much more practical than the wheeled ones existing until then. This first innovation was soon joined by other solutions, again the result of VOLPI's cleverness and production skills, such as: pre-compression sprayers, sulfur spreaders, and battery sprayers.

Even today, with the involvement of the fourth VOLPI generation in the company, the pioneering spirit of the beginnings does not stop and the range of products offered continues to expand, always with the aim of presenting on the market new and truly improved solutions for every type of work and for every season of the year. Thus, electric olive harvesters, pruning tools equipped with lithium battery and even a new rechargeable battery made entirely in Italy have arrived to widen the offer.

2015

In addition to the traditional metalworking production, VOLPI starts the injection moulding of plastic parts as well as the production of blow moulding tanks. This is an epochal turning point for the company, that involves the introduction of new specialised resources, knowledge of design and operation of all the moulds related to the products; but also an extension of the headquarters.

2001

In the early 2000s, VOLPI revolutionises the market of olive harvesting machines by developing the first range of battery-operated olive shakers called "Giulivo".

1998-1999

The first battery-operated sprayers are born: VOLPI is the first Italian manufacturer to produce this type of sprayer and makes them in two versions: with gear pump and with piston pump; the latter is the only one on the market to date.

1990

In this year one of the most successful products in the company's history is produced. The first 2lt sprayer DEA equipped with polyethylene tank, entirely self-produced by VOLPI.

2016

VOLPI research is directed to the specific field of veterinary medicine. In this way, products for vaccination and new solutions for space disinfection and distribution of aggressive products are developed. This results in the acquisition of specific know-how on special materials, lances and nozzles suitable for these applications.

2017

VOLPI starts the production of the new OLYTECH range of olive harvesters. A complete and patented line of products sharing the horizontal alternating movement of the head, equipped with brushed or brushless motor, for professional use.

2018

A whole range of battery-operated pruning tools is introduced. It deals with products that boast cutting-edge technologies and that are joined by new models each year, based on consumer needs and requirements. At the same time, a second range of pruning tools called PREDATOR, is introduced: a range of products tailored for semi-professional use.

2020

The COVID-19 emergency leads us to improve some of our equipment to make it suitable for sanitization and disinfection operations. At the same time, VOLPI transformation into a 4.0 company begins. Thanks to the automation of new equipment, we are able to meet the demand for Made in Italy products and have full control over the quality of production.

2022

Substantial investments made on production facilities enabled us to greatly increase VOLPI internal production capacity. This meant that the production of the best-known item, DEA with transparent PET tank, could be automated in every part.

2023

In these years VOLPI designed, developed and produced, the completely Made in Italy battery-operated sprayer in 2 versions: 12 and 16 lt, manufactured in our headquarters in Casalromano (MN).

We put in play solid values

Respect

It is what enables us to make the difference every day. Both inside and outside the company. Because when we make a product, we do so with the utmost respect for those who will have to use it and want to be able to count on reliable, high-quality equipment.

Passion

The basis of our work is the love for the nature and the desire to help those who take care of it. Moreover, there is the passion for our Country and the belief that there there is no manufacturer in our field that can guarantee the same levels of quality and inventiveness.

Responsibility

A sense of responsibility is something that unites all the people at VOLPI and is oriented in different directions. Toward customers, pushing us to improve and invest in new technologies to offer the best value for money. Towards the environment, on which we are aware we must impact as little as possible with our products and production processes.

Commitment

We would not be able to continuously improve our products and processes if we did not all work with maximum commitment and determination. It is what makes us grow as individuals and as a team that allows us to face each new challenge with enthusiasm and confidence.

Seriousness

One of the company's core values, that is testified by our more than 140 years of history, and made possible through the trust of our customers. Being serious to us means being transparent, fair, cooperative and responsible in fulfilling promises and commitments, both as individuals and as a company.

vision

We want to be the Italian brand of reference, recognised for the quality and reliability of agricultural and landscaping products, thanks to the aptitude for innovation that has characterised us since our foundation and the determination to always achieve the full satisfaction of the customers who rely on us to get the most out of their work.

mission

Working for a more sustainable future in which respect and education play a leading role in people's well-being, we put all our passion for nature, our ingenuity and our striving for continuous improvement at the service of those who take care of the environment 365 days a year, whether they are hobbyists or professionals. Our mission is to offer them increasingly high-performance products designed and built to operate in harmony with the environment and in total safety.

100% Made in Volpi

Self-manufacturing from components to finished products

Moulding of plastics, lathe work on metal components, assembly and packaging: all processing stages, from design to testing, are carried out in-house. Not only for the sprayers and related, which have always been produced at the historical headquarters in Casalromano, but also for the entire line of olive shakers and their accessories.

Innovation that comes from in-house design

The ability to listen to customers along with the striving for excellence are what trigger the innovation process at VOLPI, allowing constant improvements to be made on all products. Continuous and always up-to-date technological research is what has enabled our company to achieve high levels of quality and a high degree of product reliability.

In campo con te, dal 1879.

100% Accuracy

Full control over quality and testing

Every operation in the company's internal production cycle is followed with care and expertise, according to procedures guaranteed by the Quality Management System according to UNI EN ISO 9001:2015 standard. The same rigorous criteria of quality are adopted in the control, carried out piece by piece, on the pruning tools that are marketed by us.

Sprayers

In campo con te, dal 1879.

These are the products that have always represented VOLPI core business, and in their production, managed entirely in our facilities, is condensed all the company's know-how accumulated over many years of market leadership. Among this range, which also includes sulfur spreaders, micronisers and wheelbarrow sprayers, VOLPI offers 3 different lines of sprayers to satisfy the different needs of different users.

V-BLACK LINE

An assortment of selected products, both manual and electric, with a modern and attractive design. Perfect for hobbyists who use them at home and appreciate their high value for money.

v.black

VOLPITECH LINE

This is the special line for industrial applications. It is characterised by the presence of special gaskets and resistant materials, suitable for spraying solutions containing aggressive and corrosive chemicals.

Volpitech

VOLPI PROFESSIONAL LINE

The wider line, with both manual and electric items, suitable for the professional operator who works very frequently and requires high performance and reliability over time.

VOLPIPRO

In campo con te, dal 1879.

Pruning

Always one step ahead in the search for innovative products for its customers, VOLPI offers an assortment of pruning equipment that actually covers the demand for tools during the winter months. It deals with electronic products, powered by lithium batteries.

POWERCUT

This is the professional line, consisting of cordless, corded and pole-pruners; tying machines and cordless chainsaws designed to meet the needs of professionals users.

PowerCut *line*

PREDATOR

A product line that includes cordless, battery-operated pruners and chainsaws for those users who need to carry out maintenance of gardens, small orchards or vineyards.

PREDATOR *line*

Olive harvesting

In campo con te, dal 1879.

OLYTECH

A complete line of olive harvesters dedicated to professional operators: designed and produced to ensure maximum reliability even with intensive use.

OLYTECH

Our portfolio of olive harvesting equipment meets the demand of autumn months, in those lands where such cultivation is present. It consists of a wide range of small, electric, battery-powered machines. A 100% VOLPI production, designed by our engineers and patented, which has become increasingly important over the past 20 years.

GIULIVO

The olive shakers dedicated to small producers or hobbyists who personally take care of the harvesting of their olives.

Giulivo

In campo con te, dal 1879.

Always close to you with the right proposal

For the distribution of our products we rely on a team made up of sales representatives covering the whole Italian area, and importers abroad, who take care of a widespread network of dealers, with whom we have consolidated a relationship of collaboration and mutual trust over the years. Thanks to the joint work of our partners, we succeed in being present all over the world with our products and dedicated after-sales service.

Always ready to give assistance and solutions

The heart of our customer care lies in the strong sense of responsibility, shared by all the people working at VOLPI and our partners. Thanks to the commitment of means and human resources, the company offers timely and solution-oriented after-sales service like few others

- More than 150 authorised VOLPI service centers throughout Italy.
- Almost unlimited availability of spare parts.
- Properly trained partners abroad.
